Highlighted regions include EarthLink High-Speed Internet (up to 75 Mbps) and Satellite Internet (up to 20 Mbps). Actual speeds may vary. Speeds are not uniform and may vary based on a variety of factors, including the configuration of your computer, the number of concurrent users, network congestion, the capabilities and capacity of the service provider, network management practices, network hardware, and other factors. When you connect to the Internet through your ISP, your experience will vary depending on your proximity to the ISP's network and the capacity of the ISP's network.

* Speeds may vary depending on distance, line quality and network conditions.
